

Medical Laboratory Immunologist Consultant Myeloma Electrophoresis Review and interpretation

Position Overview:

Provides real-time Doctoral level support for the professional review of multiple myeloma cases. Reviews serum and urine protein capillary electrophoresis and immunofixation electrophoresis and renders interpretations to support, or disagree with, data uploaded to computer system, based on primary interpretation made by local lab medical technologists. Interacts with Medical Technologists, lab Supervisor (Testing Personnel), other regional and global functional managers and Global Scientific Advisor for Clinical Immunology to ensure harmonized and high quality data delivery in accordance to the International Myeloma Working Group (IMWG) guideline.

Responsibilities:

- Remotely reviews multiple myeloma electrophoresis results and provides interpretation of results uploaded by testing person
- Provides feedback to individual testing personnel on their interpretative skills in a timely and helpful manner
- Cooperates with other SMEs and the Global SME to provide support for sponsors as needed
- Participates in ongoing competency of testing personnel involved in myeloma studies

Experience:

Requires 5 to10 years of prior relevant experience in medical laboratory immunology specific to electrophoresis and immunoelectrophoresis as used in the diagnosis and prognosis of multiple myeloma in clinical trial subjects.

Board Certification preferred (ABMLI, ASM, AACC, ASHI)

Work Hours

Approximately 1 hour per day, Monday thru Friday, occasional Saturday. Additional hours substituting for other SMEs
